

DO YOU KNOW

How to Delete Values From Cells But Keep The Formulas In Excel?

Description:

what if you want to delete all of the data that is in the input cells but keep your formulas intact? Well there (of course) is a great simple way to do it in Excel.

1. Select the range of cells you want to work with or if you want to delete all non-formula value cells select any cell you want.
2. Click on "Home" Tab
3. Click on "Editing" Tab
4. Find and Select, Go to Special- which brings up the Go To Special dialog box.
5. Select Constants- Numbers

6. Hit Ok- all of the non-formula numeric cells are selected
7. Delete- to delete the values.

THANK YOU
